Jim and John,

I heard back from Anita and she suggested that we keep things general and just say that we have been discussing the possibility of label changes for zinc phosphide (ZP) with FWS and we are waiting to hear back from them.

As for incidents, for chlorophacinone (AI in Rozol) there have been 4 incidents since the final BiOp (April 9, 2012). However, all of these incidents have occurred in California which is not one of the 10 states in which Rozol is registered for control of black-tailed prairie dogs. For diphacinone (AI in Kaput-D), there have been 2 incidents since Kaput-D was registered on October 25, 2012. However, all of these incidents have occurred in California which is not one of the 10 states in which Rozol is registered for control of black-tailed prairie dogs.

Hopefully this addresses the questions below. Please let me know if you need additional information.

Thank you,  
Melissa

Melissa-

See item 2 below. Do we have any incident data for Rozol or Kaput since the new registration?

Jim

Subject: Meeting with NGOs thursday at 4 - agenda topics

Three new topics have been added. Don't know if we'll get to them but need to be prepared.

1. Pyridine herbicides - concern about persistence and composted manure that is phytotoxic and what we're doing to address.
2. Rozol and Kaput - any updates on impacts to non target wildlife.
3. Zinc phosphide - concern that label language old and not compliant with 1993 biop. Also could drive people to using rozol. Wondering if epa shouldn't modify zn phosphide labels now.
